

# Additional Road-Safety Solutions

## *Active Signs*

LightGuard's LED Enhanced Sign Systems give motorists advance warning of changed roadway conditions, the need to reduce speed, or sudden stops with flashing, high- intensity, LED light modules.

# Additional Road-Safety Solutions

## *RECTANGULAR RAPID FLASHING BEACON (RRFB)*

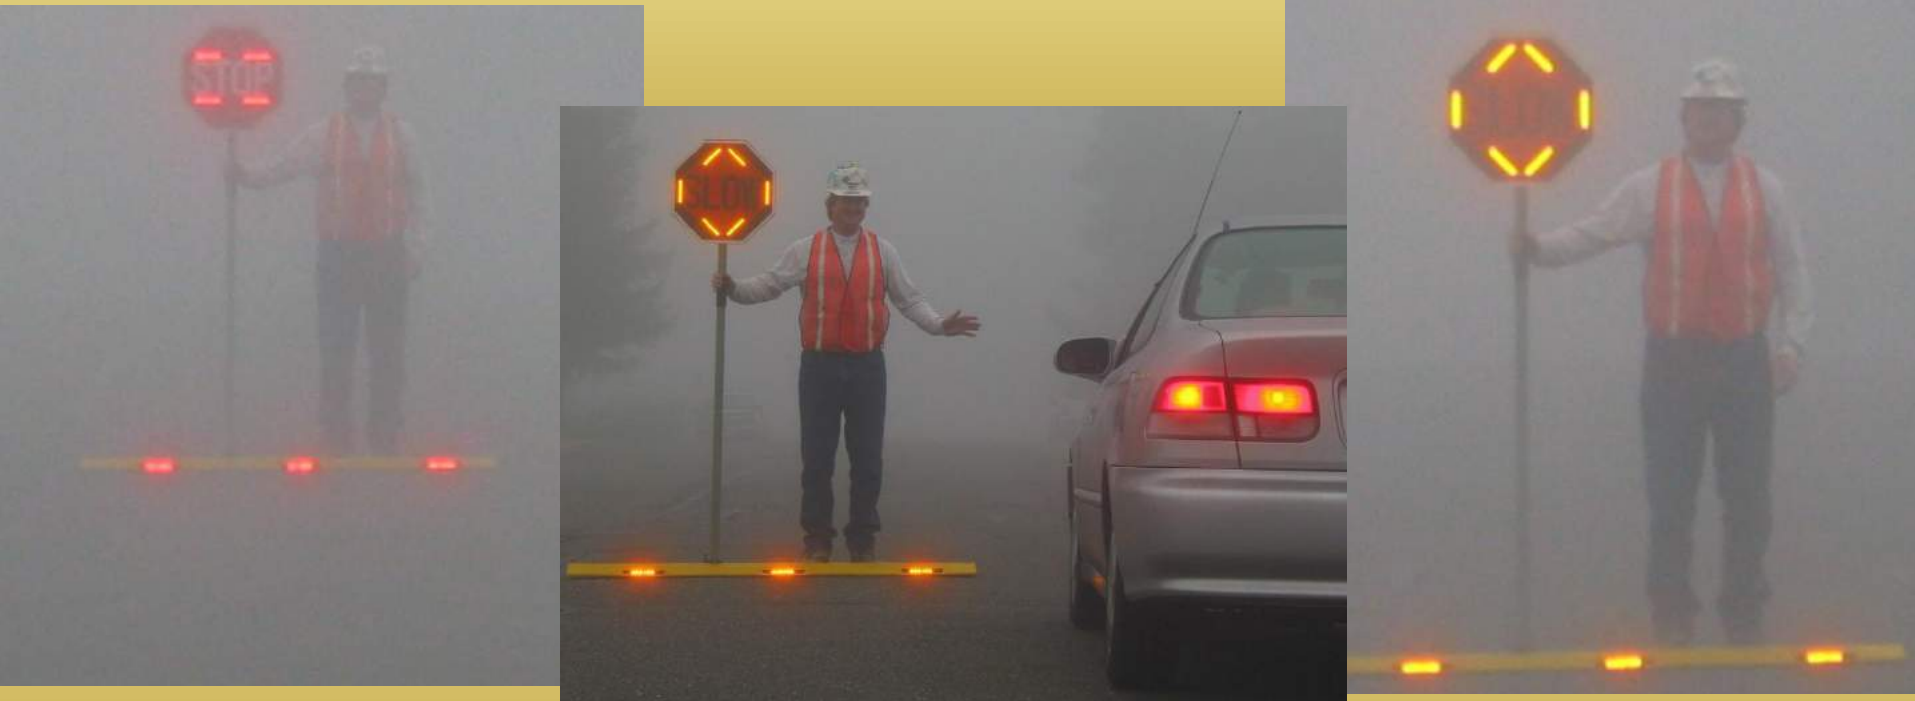

LightGuard's Rectangular Rapid Flash Beacons (RRFBs) help reduce crashes between vehicles and pedestrians at high-risk unsignalized intersections and mid-block cross walks.

Pedestrians can activate the lights by pushing a button or simply walking past the system's detection system. Our RRFB Systems use an irregular flash pattern with two user-selectable sequence options.

## *Temporary Lane Control (TLC)*

LightGuard's Temporary Lane Control (TLC) System helps protect law enforcement officials stationed at roadway checkpoints and others in need of calming traffic patterns. The system consists of a portable, lightweight stop line bar with embedded LED flashing lights, visible at up to 500 feet away in daylight, and up to 2,000 feet away at night. Durable, expandable and easy to transport.
